

Conclusion to Deployment

 [_ \(https://github.com/learn-co-curriculum/python-p4-conclusion-to-deployment\)](https://github.com/learn-co-curriculum/python-p4-conclusion-to-deployment)  [_ \(https://github.com/learn-co-curriculum/python-p4-conclusion-to-deployment/issues/new\)](https://github.com/learn-co-curriculum/python-p4-conclusion-to-deployment/issues/new)

Learning Goals

- Understand what "deploying" means.
- Understand the responsibilities of a web server.
- Evaluate platforms for deploying Flask applications.
- Set up your local environment for deploying with Render.
- Deploy a basic Flask application to Render.
- Deploy a full-stack Flask-React application to Render.

Key Vocab

- **Deployment:** the processes that make an application available for its intended use. For web applications, this means moving the application to a platform that supports requests from the internet.
- **Developer Operations (DevOps):** the practices and tools that improve a team's ability to develop and deploy applications quickly.
- **PostgreSQL:** an open-source relational database system that provides more SQL functionality than SQLite. Unlike SQLite, its data is stored on a server rather than in files.
- **Platform as a Service (PaaS):** a development and deployment platform that exists on a wide range of servers with different functionality. PaaS solutions reduce maintenance time for a software development team, but can increase cost. Some PaaS solutions, such as Render, provide free tiers for small applications.

Conclusion

In the previous module, you learned how to use the skills you've developed at Flatiron to build robust, full-stack applications. This module challenged you to learn an important process to allow you to show off your skills to the world: **deployment**.

In this module, you:

- Learned about Platforms as a Service and the many PaaS options available to you in your personal and professional development.
- Began using PostgreSQL, a server-based database solution.
- Deployed a RESTful Flask API to Render.
- Deployed a full-stack Flask-React Application to Render.

These are the last lessons of your Flatiron education- congratulations on making it this far! Up next, you will put your skills from Phase 4 to the test in the Phase 4 Code Challenge.
